

ETF TIPPING POINT WEBINAR PRESENTATION NOTES:

There are _____ sectors that we cover in this system

An _____ is an artificial Index that created to Exactly Mimic the underlying basket of stocks.

Most of the other indexes that have become ETFs are _____, which can have a little relevance to the price change.

Stocks with higher prices are given a _____ in the index than the lower-priced stocks.

Just because an ETF says it is a _____ or _____ does not mean it will work close to that way for anything but day trading.

What does _____ sector stands for?

There are _____ reasons why ETFs have become an essential portfolio-building tool.

_____ have an average of 2.22M shares per day and non optional just 119,000!

_____ where every stock has the same influenced on the reconstructed index.

_____ has filled at least 3 books with 60 or so oscillators for trading.

_____, _____, & _____, are the three basic elements to work with and everyone is looking at the same data.

Even the neophyte trader knows that moving averages are a “_____”

“_____” volume for the individual stock components that make up the entire ETF.

_____ introduced the “On Balance Volume” indicator in his 1963 book, _____

OBV (On Balance Volume) is a simple indicator that adds a period's volume when the close is _____ and subtracts the periods volume when the close is _____

The _____ of the volume additions and subtractions forms the OBV line.

There are _____ ways we can trade the ETF signals.

Our preferred method of trading is to use the second column, which is options on the _____

For timing purposes we are far better off using _____ where every stock has the same influence on the reconstructed index

Just because an ETF says it is a _____ or _____ does not mean it will work close to that way for anything but day trading.
